81% of patients received visits from at least two disciplines. 7% of patients received visits from all four disciplines.

Median time to first therapy visit increased from 4 to 5 days.

Individuals in rural settings had lower average of PT & OT visits.

158 Community Rehab Planning Meetings. 29% of CSRP Patients received a CoRP Meeting.

78% of patients received at least one virtual visit from their therapist:
PT 58% | OT 70% | SLP 41% | SW 42%

Summary 2021-22

This annual report provides an overview of the Community Stroke Rehabilitation Program (CSRP) since service inception in 2009 and reflects the most recent fiscal year (FY) data (April 1, 2021 – March 31, 2022).

Eligible stroke survivors following their hospital discharge to either community or long-term care (LTC) receive the appropriate level of therapy to support their ongoing rehabilitation through the provision of: Physiotherapy (PT), Occupational Therapy (OT), Speech-Language Pathology (SLP) and Social Work (SW).

Community Stroke Rehab Program Description			Key Findings in 2021-22
	Weeks 1-4	Weeks 5-12	
OT	Up to 12 visits over 4 weeks	Up to 16 visits over 8 weeks	<ul style="list-style-type: none"> Total patients and visits were both down 4% from last fiscal year. Median total visits remained stable at 11 visits. The median wait time to first home therapy visit increased from 4 to 5 days. 78% of patients received at least one virtual visit
PT	Up to 12 visits over 4 weeks	Up to 16 visits over 8 weeks	
SLP	Up to 8 visits over 4 weeks	Up to 8 visits over 8 weeks	
SW	Up to 4 visits over 4 weeks	Up to 4 visits over 8 weeks	
Information on various community programs is available through Stroke Network of Southeastern Ontario's website under Community Supports and through the South East Health Line under Stroke Resources .	A Community Rehab Planning (CoRP) meeting should be considered for all discharges from rehab . The CoRP ideally occurs within 72 hours of discharge but planning for this meeting could start as early as two weeks prior to discharge	Consider referral to Stroke Survivor and Caregiver Support Groups, Stroke Specific Exercise Programs and Aphasia Supportive Conversation Groups and to other community exercise programs when appropriate
