

VISION THERAPY

LET US HELP YOU
SEE THE WORLD
BETTER

VISION REHABILITATION

Approximately 60% of the brain is required for visual processing. When brain damage occurs from a laceration, concussion, neurodegeneration, stroke or even surgery, the visual process can be affected. With our specialized **Neuro Visual Skills Examinations** and **Vision Rehabilitation Services**, our team can help you improve your visual processing thanks to the power of optometric vision therapy and neuroplasticity. Get in touch with us today to find out more!

OUR SERVICES

- **Neuro Optometric Visual Skills Examinations:** A comprehensive vision exam where the optometrist will exam your visual skills from a neurological perspective
- **Specialized Glasses Prescriptions:** With the help of prisms and lenses, a trained optometrist can give a prescription to help improve visual perception, gait, and posture
- **Vision Therapy:** Exercises designed to help patients improve basic visual skills that connect the eyes with the brain
- **Visual Evoked Potential (VEP):** The Diopsys NOVA device helps us determine how the eyes communicate with the brain in a way that no other instrument or vision test can
- **Vivid Vision:** This cutting edge system provides a controlled 3D virtual reality environment to improve binocular vision
