AGENDA

- Background of stroke support group services provided
- Evaluation
- Challenges and recommendations
Southeastern Ontario

Population 500,000
20,000 km²
Mission: to provide community-based support for stroke survivors and their care partners

Vision: stroke survivors will continue to maximize their potential with the support of care partners and peers

Values:
- **Hope:** Promoting the optimism that ongoing recovery is possible
- **Support:** Building relationships with peers and linking with community service providers
- **Peer collaboration:** Sharing tips and strategies with people who face similar challenges
- **Restorative care:** Providing the opportunity to maximize potential
- **Empowerment:** Gaining the knowledge and confidence to take charge of your life
- **Health Promotion:** Maintaining healthy lifestyles to prevent future strokes
Regional Stroke Services include:

• Professionally facilitated groups for survivors, caregivers and couples. In Brockville and Perth, survivors and caregivers meet collectively. In Belleville and Kingston, there are separate groups for survivors, caregivers and couples.

• Heart and Stroke Foundation Living with Stroke™ program

• Individual support and system navigation
FACILITATOR ROLE

- Psychosocial counselling
- System navigation
- Outreach to survivors & caregivers
- Education and support for self-management
- Networking with health and social service partners
EVALUATION

Components:
- Montgomery-Borgatta Caregiver Burden Scale
- Stroke Impact Scale
- Participant Survey
- Individual interviews with couples (Kingston)
- Survivor & caregiver focus groups (Kingston)
Summary of Results
demonstrating value of facilitated support groups

- Growth in referrals and group participation
- Benefits of providing system navigation and support
- Positive effects of group participation on well-being, coping with anxiety/nervousness, depression and stressors for both caregivers and stroke survivors
- Improved post-test scores on the Stroke Impact Scale in areas of communication, memory/thinking and perceived recovery
- Decreased objective and subjective caregiver burden using the Montgomery-Borgatta Caregiver Burden Assessment
- Strong participant satisfaction
- Rich and positive feedback from focus groups

Promoting Community Reintegration

COMMUNITY REINTEGRATION - SURVIVORS
"How have support groups helped with..."

- Healthy living
- Lifestyle change
- Managing home
- Managing in the community
- Setting realistic goals
- Community resources
- Volunteering

Stroke Services Evaluation Tool
“The amounts of time I spend at these sessions are well worth the time. It helps me mentally which in turn helps me physically; reducing the time spent at my doctors”.

“I come to the group and I’ve learned so much, I feel much better and the way I look at it, it’s groups like this that kept me from rushing to a hospital thinking there is something wrong, because before I would have situations where I have experienced something for the first time”.

Pre-to Post-Test Changes on Stroke Impact Scale – Memory and Thinking Sub-Scale

“Family helps tremendously if you have a good family life but not everyone has this support, so the stroke group is great because you can voice your fears and anxieties and most of them can understand”. ~ Survivor

CAREGIVERS

“You’re absorbing all the information of what everybody else is going through because I may need that in the future.”
CAREGIVERS

“Our group is able to open up regarding their emotions and frustrations which I think is very important.”

“I find going to the Caregiver and Couples group has held my depression”.

Facilitated Support Groups: Reducing Caregiver Stress

CAREGIVERS

“When you are in the group and a new person comes in and you see how overwhelmed and frazzled they are, you think “that was me, I understand what they’re going through and then you realize, oh I’ve come a long way”. I calmly deal with things now instead of hyper-panicking”.

Satisfaction in their own words…

“Very helpful when participants share the problems they are facing and suggestions for dealing with them. It would be great if everyone in the group would make this meeting a priority. The more attending makes it better!”. ~ Caregiver

“I am a new participant in the programme and enjoy the opportunity to socialize with others and look forward to attending many more meetings”. ~ Survivor

CONCLUSIONS

DEMONSTRATED VALUE OF FACILITATED SUPPORT GROUPS:
- Growth in referrals and activity;
- Provision of system navigation support;
- Positive effects of group participation on well-being, coping with anxiety/nervousness, depression and stressors for both caregivers and stroke survivors;
- Improved post test scores on the Stroke Impact Scale in areas of communication, memory, thinking and perceived recovery;
- Decreased objective and subjective caregiver burden using the Montgomery Borgatta Caregiver Burden Scale;
- Strong participant satisfaction;
- Rich and positive feedback from focus groups.
Challenges and Recommendations

- Impact of funding uncertainty
- Capacity to expand groups to meet demand is limited
- Inability to respond to needs in rural areas due to lack of resources.
- Difficult to meet unique needs of younger survivors and couples
- Limited ability to provide transportation
RECOMMENDATIONS for SUCCESS

- Maintaining the existing groups
- Additional informal social support for long-time group members
- Recruitment and intake of new participants
- Professional group facilitation, health education and system navigation
- Ongoing evaluation
- Outreach to health and community service providers
- Delivery of Living with Stroke™ series
- An aphasia conversation group in collaboration with the CCAC and Stroke Network of SEO
- Enhanced hospital peer visiting program
- Enhanced regional collaboration to develop best practices for community-based support groups and services for stroke survivors and caregivers
THE FINAL WORD…

“As soon as I joined the stroke group, my initial hope was strengthened by the success stories of other stroke victims. With determination, exercising and the positive vibes I received at each meeting. I met my goal of regaining almost full equilibrium and good mobility. It is a well-run program that I know has helped many people in my group to continue to look forward and be happy and successful in our ‘new life’” ~ Survivor
